PORCELAIN GLUE

Porcelain ceramics have very little water absorption, for this purpose, a type of glue has been made in the chemical industry, which is called porcelain glue.

These adhesives can stick ceramic tiles to different surfaces. Porcelain glue has many advantages over ordinary glues. Ordinary glues cannot stick porcelain tiles and ceramics to different surfaces and will need other materials such as cement, but porcelain glue can easily handle this task.

Porcelain adhesives are available in the market in the form of powder and paste.
